

PART 1 · FIELD TEAM

CREWS & TECHNICIANS

Every job. Every day. Documented in Service Autopilot.

Good morning team 🙌 — a big chunk of this morning went to auditing Friday's routes, tracking down missing information, and emailing people for updates. That time should have gone to other work. Here's what's required from the field **starting today**.

Effective immediately. These aren't suggestions — they're the standard for every route, every crew, every day.

01 Clock in & out of every job

No exceptions — **every single job** gets a clock-in and a clock-out.

- ✓ SA not working? Tell **Jon** or **Tausha** right away so it can be documented.

02 Mark it on the dispatch board

Each job must be marked **Complete** or **Skipped**. Nothing left open at the end of the day.

- ✓ Completed = **post-service form submitted**.

03 Detailed comments on skips & changes

If a service is skipped or changed, write down:

- ✓ What happened
- ✓ Whether the client was contacted
- ✓ What needs to happen next

04 Relay it to the office — same day

Anything you can't enter in SA gets called or texted to the office **before the day ends** — so the client can be notified the same day, not the next morning.

Before you leave the field

- ☐ Clocked in/out on every stop
- ☐ Every job marked complete or skipped
- ☐ Post-service forms submitted
- ☐ Skip/change comments written
- ☐ Office told about anything unusual

Why this matters. I've given a lot of grace this season, and I can't keep doing that. When it isn't documented, the office spends hours figuring out what happened. Use the system and follow through — **it's as simple as that**.

🧑 **Jon** — please make sure every crew member understands: everything gets documented in Service Autopilot or relayed to the office **the same day**.

Records as accurate at night as the schedule is in the morning.

Donise and I are in Georgia 🍑. We build the schedules, and we rely on Service Autopilot to know what happened in the field. Job statuses, forms, and follow-up notes need to be right by end of day — every day.

01 Notify clients the same day

If a service is **skipped or changed**, the client hears from us **that same day**.

- ✓ Do not wait until the following morning.

02 Close out the dispatch board

Every job marked **Complete** or **Skipped**, with the post-service form submitted for completed work.

- ✓ Chase anything left open before end of day.

03 Document the follow-up

Every skip or change gets a detailed job comment:

- ✓ What happened
- ✓ Whether the client was contacted
- ✓ What needs to happen next

04 Log system problems

When a crew reports SA isn't working, **Jon / Tausha** document the issue **right away** so we have a record of what happened and why.

05 Finish the day with accurate records

By end of day, Service Autopilot should tell the full story of the day — **statuses, forms, and notes** — without anyone having to email around the next morning to piece it together.

A note from me. I've given a lot of grace this season, and I'm at the point where I can't keep doing that. I spend too much time trying to figure out what happened because things aren't being documented. I need everyone to use the system and follow through. **It's as simple as that.**

Thank you,

Jeff · Automated Lawn & Pest
