LAST UPDATED	_____	QUICK LOOK	Field & Admin Documentation Quick Look

1 Purpose

Customer service is everything. Good documentation is good customer service.

For the customer: they know what was done, what changed, and what happens next.

For the company: everyone can see what happened without chasing someone down.

We build schedules from Service Autopilot (SA) and rely on it to know what happened in the field. When a client says we never showed up, our photos and clock times are how we prove the work was done. This SOP explains what every employee documents, and when.

2 Who this applies to

- **Field Team:** every crew member and technician, on every job and every service.
- **Admin Team:** everyone in the office who talks to clients or changes jobs in SA.
- **Managers:** are responsible for reinforcing this standard and addressing missing or incomplete documentation. They check it through periodic reviews.

3 The standard

Document it.

Every job gets the correct status on the dispatch board: **Complete** or **Skipped**.

Every completed job gets the required post-service form.

Log it.

Clock in and out of every job.

Log client communication in SA: calls, texts and emails with a client go in SA, not only on your phone.

Photograph it.

Take pictures on every job, for every service.

Be proud of your work. Upload them to the job before you leave the property whenever reasonably possible. If a real technical problem stops the upload, upload them the same day.

If something prevents, changes or affects service, photograph the reason when appropriate.

Service-specific SOPs (for example, blowouts) may require additional photos.

Notate it.

When a service is skipped or changed, add a job comment **the same day** that answers:

- ① **What happened?**
- ② **Was the client contacted?**
- ③ **What happens next?**

4 Normal job

- 1 **Arrive and clock in.**
- 2 **Do the work.**
- 3 **Take photos** of the work and upload them to the job before you leave.
- 4 **Complete the required documentation.** Submit the post-service form.
- 5 **Set the status to Complete** on the dispatch board.
- 6 **Clock out.**

5 Skipped or changed job

The person who runs into the problem, or makes the change, starts the communication and documents what happened.

- 1 **Something changed.** The service was skipped, changed, or couldn't be done as scheduled.
- 2 **Document what happened** in the job comment.
- 3 **Take photos of the reason** when appropriate. Examples include a locked gate, a dog in the yard, weather, or damage; there are other reasons too.
- 4 **Contact the client, or try to, the same day**, as appropriate. Do not wait until the next morning.
- 5 **Record the communication** in the job comment: was the client contacted?
- 6 **Document what happens next** and set the correct status.

Need the office? If it needs scheduling, an account change, pricing, or anything else the office handles, make a clear handoff to Admin. Note the handoff in the job comment. You still document your part. Admin owns the part handed to them and documents what they do.

6 Ownership: don't pass it off, just do it

DON'T PASS IT OFF. JUST DO IT. YOU DID IT → YOU DOCUMENT IT.

If you did the work, saw the problem, took the call, made the change or handled the situation, **you document your part in SA**. Don't hand it to a coworker just because they could enter it.

- The tech who did the job clocks in and out, takes and uploads the photos, and writes what happened.
- **Two-person crews:** the crew lead owns the main job documentation and closes the job. Other crew members don't duplicate it, but they document anything they personally handled that isn't already in the job record.
- The person who talked to the client records that conversation.
- The person who changed a job in SA notes what they changed and why.

A handoff does not end your part. If you tell the office about a problem, you still document what you did and what you saw. The person who takes it from there documents their part.

7 Service Autopilot

SA is the source of truth. If it happened, document it — good, bad, or unexpected.

If SA isn't working:

- Keep taking the required photos.
- Keep the job information you'll need to enter.
- **Tell Jon or Tausha right away.**
- Enter the required documentation in SA as soon as it's back.

8 End of day

Before you finish for the day, make sure your documentation is accurate and complete:

- ☐ Every one of your jobs is marked **Complete** or **Skipped**.
- ☐ Every completed job has its post-service form.
- ☐ You clocked in and out of every job.
- ☐ Your photos are uploaded to the job, before you left the property whenever possible, and the same day at the latest.
- ☐ Every skipped or changed job has a job comment answering ① ② ③.
- ☐ Any client communication you had is recorded in SA.

The job statuses, forms and notes should be as accurate at the end of the day as the schedule is in the morning. Getting your documentation right is your job. Admin does not check every job; managers review periodically.
